Online Survey Subject: Biosolids Land Application Practices in Australia _ HC230185 Invitation to participate in research

Research Study Title: Understanding impacts and opportunities for beneficial reuse of biosolids via land application.

Researchers at UNSW and UWA, as part of ARC Training Centre for the Transformation of Australia's Biosolids Resource (transformingbiosolids.org.au/), are conducting a project on biosolids land application methods and management practices in Australia. This project is part of Project 3A – Linking Stability, Odour and Production route (transformingbiosolids.org.au/3a-linking-stability-odour-and-production-route/), which addresses the knowledge gaps in the fundamental science on how biosolids odours are formed and emitted.

Odour emissions remain one of the major challenges for beneficial reuse of biosolids, thus, this project aims to compile data on biosolids applied to land in Australia and the following survey has been prepared for **stakeholders, utilities, contractors, end-users** involved in biosolids management and land application. The survey results will be used to understand the current biosolids land application methods and management practiced in Australia, by compiling data on biosolids applied to land and comparing land application methods with local standards and global practices.

Participation in this research is optional and voluntary.

It will take approximately **15 minutes** to complete the survey outlined in the attached Participant Information Statement, which contains a full description of the research activities, risks associated with these activities and any discomforts that you may experience during the research. If you would like to take part in this research, you can do so by selecting the following link https://unsw.au1.qualtrics.com/jfe/form/SV_5hggFZwjpsEkFv0

If you require further information regarding this study or if you have any problems which may be related to your involvement in the study, you can contact the following member/s of the research team:
